

autoware™

The Software Solution For Electrical Safety Compliance Testing

Download A FREE Evaluation Copy Of Autoware At www.asresearch.com

- Installs Quickly & Easily On Any Windows-Based System
- Automatic Setup Eliminates Operator Error
- Easy Setup Of Line Leakage Tests With Auto-Configurator
- ASCII Format Allows For Import Of Test Data Into Any Spreadsheet, Word Processing Or Database Program
- Easy-To-Use, Built-In Help Screens Provide Complete Instructional Assistance
- Choice Of RS-232 Or GPIB Communication Interfaces

autoware™
Software For Electrical Safety Compliance Testing

At Associated Research, Electrical Safety Compliance Testing Is Our Only Focus!

Now You Can Improve The Efficiency Of Your Production Line Testing With Autoware™

Autoware provides manufacturers with an easy way to increase production line throughput and reliability by allowing enhanced control of the complete test process from test set-up to reviewing test results. Autoware's Windows® format provides clear and accurate test set-up screens. Autoware is also the only stand-alone software that can capture, store and analyze test results. It will accept data from any keyboard emulation bar code scanner to capture model and serial number information and provides the choice of RS-232 or GPIB communication interfaces. This provides manufacturers an efficient way to ensure compliance to electrical safety testing standards established by agencies such as UL, CSA, and IEC among others.

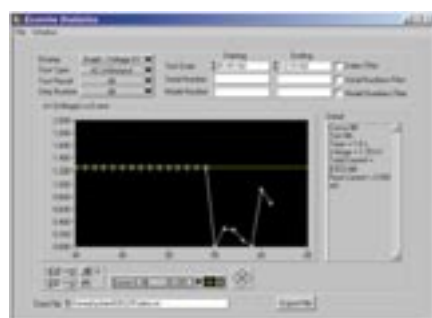

Quick and Easy Installation

Autoware installs quickly and easily on any system with Windows® 9x/ME/NT/2000/XP. Its automatic setup eliminates operator error and built-in help screens provide complete instructional assistance. It performs Line Leakage, Insulation Resistance, Dielectric Withstand, Ground Bond and Functional Run tests. Used in tandem with our automated electrical safety compliance testers, Autoware, can store, analyze and retrieve data instantly.

Simplified Test Setup

Autoware provides a simplified test setup process. The file manager feature allows tests to be saved and retrieved as files. This provides flexibility on production lines where different products need to be tested. Setup also includes the auto-configurator feature. This allows a user to quickly and accurately setup the 8 most common configurations for line leakage tests in compliance with common agency specifications.

Instant Access to Test Results

Autoware software captures information and stores it in real-time for later analysis. All possible pass/fail statistics can be viewed in detailed, summary, or a graphical format. Built-in data analysis software automatically converts raw test results, which can be imported into any spreadsheet, word processing or database program.

Instrument Specific Control Software

There is a version of Autoware available for each of our automated electrical safety compliance testers. To find the right version of Autoware for your instrument see our web site at www.asresearch.com/products/software.

For Over 65 Years,
